72

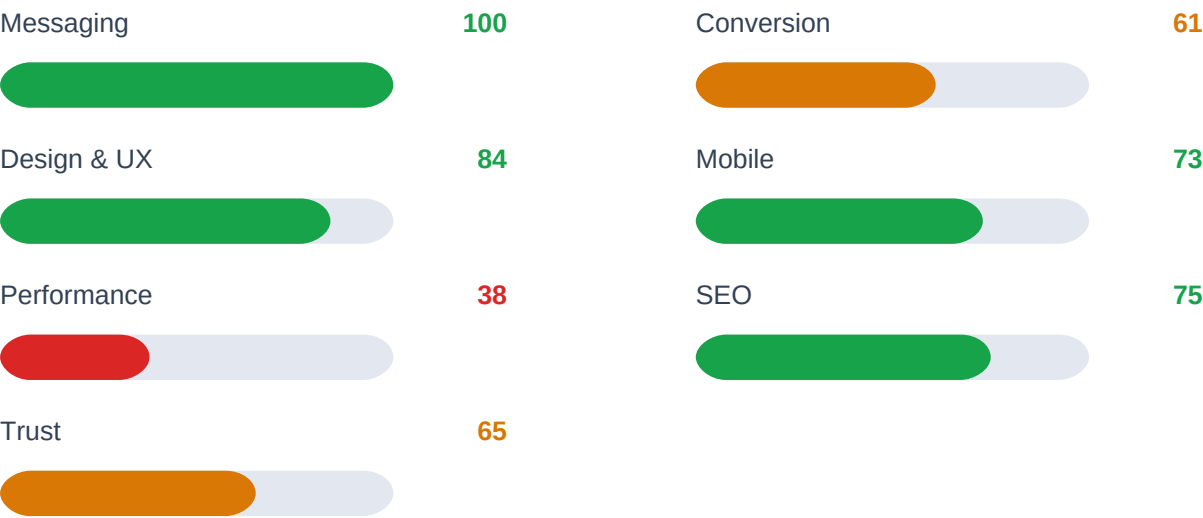

OVERALL PERFORMANCE SCORE

This website shows solid fundamentals with opportunities for targeted improvement.

Executive Summary

This website demonstrates strong fundamentals across most evaluation criteria. The following analysis highlights areas performing well and opportunities for continued optimization. The Castellano Cosmetic Surgery website effectively communicates its services and expertise in plastic surgery in Tampa. It features a clear value proposition, team photos, and social proof through numbers. However, there are opportunities to improve conversion by making CTAs more consistent and prominent, simplifying forms, and adding more trust signals like client testimonials above the fold. The site also has a good foundation for SEO but could benefit from more targeted content.

Performance by Category

Immediate Opportunities

High Impact, Low Effort Improvements

1

Add a sticky 'Book Now' or 'Schedule Consultation' button for easier access on all pages.

2

Make all CTA buttons visually consistent in style, color, and text.

3

Shorten the main contact form to only essential fields to reduce friction.

How to Interpret This Score

- Scores are criteria-based, not subjective opinions
- No manual adjustments are made to any scores
- The same methodology is applied before and after improvements
- Pages that cannot be accessed publicly are marked 'Not Scorable' rather than penalized
- Missing or unavailable data is treated conservatively, never inflated

Score Scale Reference

90-100: Excellent

Strong performance across all criteria

70-89: Good

Solid foundation with optimization opportunities

50-69: Needs Work

Structural issues limiting effectiveness

0-49: Needs Attention

Multiple areas requiring immediate focus

Messaging & Offer Clarity

100 /100

Impacts: First impressions, bounce rate, and visitor engagement

- The main headline 'Plastic Surgery Tampa' is clear and location-specific, which is good for local search.
- The subheadline clearly states the benefit of enhancing appearance and self-esteem with natural-looking results.
- The site effectively positions the practice as an 'award-winning aesthetics practice' and highlights the surgeons' experience with specific numbers like '4,000 Breast Augmentations'.

Recommended Headline:

Achieve Your Aesthetic Goals with Expert Plastic Surgery in Tampa

Recommended Subheadline:

Experience personalized care and natural-looking results from Tampa's leading cosmetic surgeons.

Conversion & Lead Capture

61 /100

Impacts: Lead generation, form completions, and revenue opportunities

Why This Matters

Even high-traffic websites fail without clear conversion paths. Every missing CTA is a missed customer.

- The website has multiple CTAs like 'CONTACT US' and 'Book Now', but their visual style and placement are inconsistent, which can confuse users.
- The contact forms are quite long, with many fields, which might deter potential clients from completing them.
- There is a 'Treatment Planner' which is a good interactive qualifier, but it's not as prominent as it could be.
- ! Implement a consistent design for all primary call-to-action buttons across the site, using a high-contrast color to make them stand out.

- ! Reduce the number of fields in the initial contact form to only the most essential (Name, Email, Phone, Service of Interest) to increase completion rates.
- ! Add a sticky 'Schedule Consultation' or 'Book Now' button that remains visible as users scroll, especially on service pages.
- ! Promote the 'Treatment Planner' more prominently, perhaps in the hero section or as a pop-up, to engage users before they commit to a consultation.

Design & User Experience

84 /100

Impacts: User trust, navigation ease, and professional credibility

- The website uses distinct heading sizes, creating a clear visual hierarchy that guides the user's eye through the content.
- The overall design is professional and clean, fitting for a cosmetic surgery practice, but some CTA buttons lack visual prominence due to inconsistent styling.
- The 'Our Photo Gallery' section is present but could be more engaging with a direct link to specific before & after categories rather than just a general link.
- ! Ensure all primary CTA buttons use a consistent, high-contrast color and size to improve their visual prominence and user recognition.
- ! Improve the visual presentation of the 'Our Photo Gallery' by featuring a few compelling before & after images directly on the homepage with clear links to full galleries.
- ! Consider adding subtle animations or interactive elements to key sections to make the user experience more dynamic and engaging.

Mobile Experience

73 /100

Impacts: Mobile traffic conversion, local search visibility, and user accessibility

- The website appears to be responsive and images are optimized for mobile, ensuring a good viewing experience on smaller screens.
- There is no persistent call-to-action button (like a 'Call Now' or 'Book Now') that stays visible as users scroll on mobile devices, which can make it harder for users to convert quickly.
- The navigation menu is well-structured for mobile, but the depth to service pages (2 clicks) could be slightly reduced for faster access.
- ! Implement a sticky 'Call Now' or 'Book Consultation' button at the bottom of the screen on mobile devices to provide an always-available conversion path.
- ! Test the mobile form experience to ensure ease of input, especially for longer forms, and consider using larger tap targets for form fields and buttons.
- ! Review the mobile navigation to see if the most popular service categories can be accessed in fewer taps.

Speed & Performance

38 /100

Impacts: Page speed, user patience, and search engine rankings

Why This Matters

Every second of delay reduces conversions by 7%. Speed is both a ranking factor and UX essential.

- The website uses WebP images, which is a good practice for image optimization and faster loading times.
- With 44 external scripts, there's a potential for slower page load speeds, which can negatively impact user experience and SEO.
- The large body text length (170,695 characters) suggests a lot of content, which is good for SEO, but needs to be delivered efficiently to avoid performance bottlenecks.

- ! Largest Contentful Paint: 22.0s (poor)
- ! Cumulative Layout Shift: 0.00 (good)
- ! Total Blocking Time: 1202ms (poor)
- ! Measured via Google PageSpeed Insights — the same data Google uses in ranking.
- ! Audit and reduce the number of external scripts by consolidating or deferring non-essential scripts to improve page load performance.
- ! Implement browser caching for static assets to reduce load times for repeat visitors.
- ! Consider using a Content Delivery Network (CDN) to serve images and other static files faster to users globally.

SEO & Local Search

75 /100

Impacts: Search visibility, organic traffic, and lead acquisition cost

- The title tag and H1 are well-optimized with 'Plastic Surgery Tampa', clearly indicating the service and location.
- The meta description is informative and includes relevant keywords like 'expert plastic surgery' and 'Tampa', encouraging clicks.
- The site uses schema markup for 'MedicalOrganization' and 'Person', which helps search engines understand the content and context of the practice.

Recommended Title:

Plastic Surgery & Med Spa in Tampa | Castellano Cosmetic Surgery

Recommended Meta:

Achieve your aesthetic goals with expert plastic surgery and med spa treatments in Tampa. Castellano Cosmetic Surgery offers personalized care for natural, beautiful results.

Target Keywords:

plastic surgery Tampa, cosmetic surgery Tampa, breast augmentation Tampa, tummy tuck Tampa, med spa Tampa

Trust & Credibility

65 /100

Impacts: Customer confidence, conversion rates, and brand perception

Why This Matters

Trust signals convert browsers into buyers. Without credibility markers, visitors hesitate to take action.

- The website effectively builds trust by showcasing the team, including photos and names, and highlighting the doctors' experience with specific numbers ('4,000 Breast Augmentations').
- The mention of an 'accredited surgical facility' adds a layer of credibility and safety assurance for potential patients.
- While social proof numbers are present, there are no visible client testimonials or review stars above the fold to immediately establish trust.
- ! Trusted cosmetic surgeons with extensive experience
- ! A private, accredited surgical facility for safety and comfort
- ! Customized treatment plans tailored to each patient's goals

Technical Fundamentals

- The website has SSL encryption, which is crucial for security and builds trust with visitors.
- The presence of a canonical tag helps prevent duplicate content issues and guides search engines to the preferred version of the page.
- The site uses a viewport meta tag, ensuring it adapts correctly to different screen sizes, which is essential for mobile users.
- ! Regularly monitor and update all schema markup to ensure it is accurate and comprehensive, covering all relevant aspects of the medical organization and services.
- ! Conduct a thorough audit of external scripts to identify and remove any unnecessary or redundant ones that could be impacting site performance.
- ! Ensure all internal links are working correctly and that there are no broken links that could harm user experience or SEO.

What This Audit Enables

This analysis provides the foundation for strategic improvements across several areas:

Website Redesign Justification

Data-driven evidence to support investment in website improvements with clear before/after benchmarks

SEO Strategy Development

Identified gaps in search optimization that can be addressed through targeted SEO work

Conversion Rate Optimization

Clear opportunities to improve lead capture and reduce friction in the customer journey

Ongoing Performance Monitoring

Baseline metrics to measure improvement over time and demonstrate ROI

Scoring Methodology

OptimizeMySuite evaluates websites using objective, criteria-based signals across messaging clarity, conversion paths, trust signals, SEO fundamentals, and technical accessibility. The same scoring methodology is applied before and after improvements to ensure fair comparison. Pages that cannot be accessed publicly are marked as Not Scorable rather than penalized. Scores are never guessed or manually adjusted.

Built for agencies to justify recommendations with clear, repeatable evidence.
